RFP-MLEMS-05-15

Addendum #1: Questions and Answers

May 13, 2015

Logistics Department
Middlesex-London Emergency Medical Services
340 Waterloo St.
London, ON N6B 2N6

Please note the following questions and answers to the original RFP release*:

<i>Questions Related to Mandatory Requirements of the RFP</i>		
<i>Question #</i>	<i>Question</i>	<i>Answer</i>
1	Under " <u>2.3 Rated Requirements</u> " on page 5. "Stretcher should be capable of securing the Lifepak 16 Monitor/Defibrillators used by MLEMS."	This was the result of a typo error. We currently use the Lifepak "15".
2	Is this just for onsite use? Or will you be wanting the product and associated charging fasteners installed in the truck for an actual trial period?	We would like to have the ability to mount a stretcher in one of our vehicles. If you can provide us with a portable charging unit, we don't see the need to wire up an on-board charging unit for the trial period.
3	If the product is to be delivered for trial purposes, we would need to know what kind/style of truck and how long we have access to the vehicle for install of fastening equipment.	Our vehicles are Type III Crestline and Demers, Chevrolet 3500 FleetMax. We estimate requiring the sample cots for 3-4 weeks.
4	When should we schedule a technician to train the staff at MLEMS.	Our plan is to have the vendors in on May 25 th to do the initial training for the review committee. Additional training can be scheduled at that time if needed.
5	How many cots are you intending to purchase?	The Corporation is seeking to refresh between 35-45 cots. 35 cots will equip the current fleet, with the number of extra cots purchased depending on our budget vs. quoted price of the successful bid.

**Some questions submitted needed to be edited or paraphrased in order to ensure the question and its answer apply to potential proponents to the RFP in generic fashion*
